

DAPS&CO

Data Access & Regulation, Module 3

Instructor: Robert Fahey <robfahey@aoni.waseda.jp>

Assignment 9 **11 March 2022 (Fri)**

**This is your final assignment for this module, and is worth the remaining 25% of your grade.
It is due on Friday, March 25th.**

Assignment Task:

- This task follows on from yesterday's task, in which you outlined a large-scale research project you would like to pursue.

For this assignment, you must prepare and submit a full Data Management Plan for the research project you outlined. You may create a document in your own format, or use the ERC template document supplied in the class files archive.

Regardless of which format you submit in, your DMP should address all of the points raised in today's lecture, and explain how you will approach them in your research project. (The only exception is cost - you are not required to create a budget or research the specific costs of your project.)

Think carefully about any complexities that might be introduced by the type of data you're handling (e.g. is it private or copyrighted data? Does it include personal information? Will you need to "anonymise" it?) or the team you're working with (will you need your data resources to be available to members around the world? Will you be working in multiple languages?). Try to honestly engage with those problems and find solutions for them, rather than just avoiding them or retroactively changing your research plans!

Submission:

Email the DMP (in a Word document or PDF) to me (robfahey@aoni.waseda.jp). The deadline for this assignment is Friday, March 5th.

A Note about Late Submissions:

If you have not submitted any of the previous assignments in this class, they will be accepted without grade penalty up until next Monday, March 14th.

- *After that, a grade penalty will be applied to any submitted assignments.*
- *No late assignments will be accepted after Friday, March 25th. You will receive a zero grade for any assignment which is not submitted by that date.*
