

DAPS&CO

Data Access & Regulation, Module 3

Instructor: Robert Fahey <robfahey@aoni.waseda.jp>

Assignment 7 **16 Feb 2021 (Tue)**

Assignment Task:

Today's task is to follow the steps we used in class today with the Amazon Reviews database, and add your own research data (or your chosen Kaggle data file) to a MongoDB collection.

One thing to watch out for is the column names on your dataframe - you should change any column name which contains a space, as MongoDB will have a hard time indexing data that includes spaces in the names.

Submission:

Email the R file you used for this to me (robfahey@aoni.waseda.jp) before tomorrow's class (Wednesday, Feb 17th, 9am CET).

Late Submission:

Late submissions without a reason (illness etc.) will be accepted (with a grade penalty of 5% per weekday) up until the day of the module's final class (Tuesday, Feb 23rd). Any submission after that date will be rejected and your grade for this assignment will be zero.
